Inswing

## CLAD TECHNOLOGY

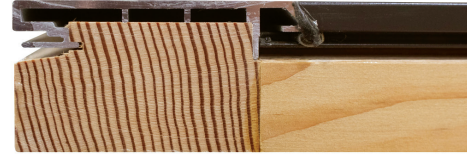

Joining two unique materials in an innovative way that increases the resilience of our products.

### Product Customization

- Multiple mulling options for creating multi-lite assemblies
- Every window and door built to meet your specific requirements
- A variety of glazing options to suit specific project needs
- We can provide drawings upon request
- Our handcrafted wood windows and doors are priced competitively compared to similar products in the market

### Extruded Aluminum Clad Exterior

Frame & sash have .094" extrusions with Kynar Finish in Standard or Custom Colors. We are able to color match.

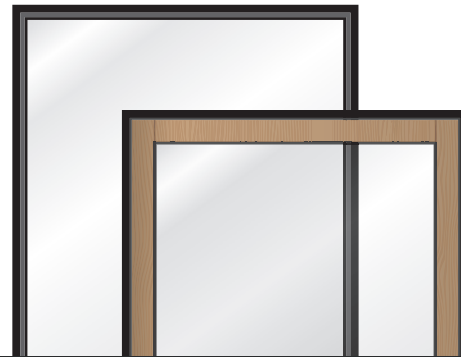

### Vertical Grain Douglas Fir Interior

Vertical grain fir is indigenous to the Pacific Northwest and has earned its place as a favored standard, thanks to its beauty, strength, and durability.

Casement and picture windows maximize views by using the least amount of wood surrounding the glass.

The picture window frame has a net frame to visible daylight measurement of 1-5/16" and has a total frame depth measurement of 2-1/8". This provides a maximum visible glass area and maximum design flexibility.

Beautiful and strong, our windows and doors are energy-efficient and exquisitely timeless.

Our doors have 2-1/4" solid wood stiles and rails, which ensures a consistent appearance between door types. A 1-3/4" thickness is available on select products.
